

Machine Learning Assignment – 01

Name: Akhil Patlori

Student ID:700744211

1. Numpy:

a. Using NumPy create random vector of size 15 having only Integers in the range 1-20.

1. Reshape the array to 3 by 5

2. Print array shape.

3. Replace the max in each row by 0

```
import numpy as np
# create random vector of size 15 with integers in range 1-20
vec = np.random.randint(1, 21, size=15)

# reshape to 3 by 5
arr = vec.reshape(3, 5)

# print array shape
print("Array shape:", arr.shape)

# replace max in each row by 0
arr[np.arange(len(arr)), arr.argmax(axis=1)] = 0

print(arr)
```

Github Link: <https://github.com/AkhilPatlori/MachineLearningAssignment1>

Array shape: (3, 5)

```
[[15  2  0 16  8]
 [ 1 13  0  7  7]
 [ 2  9 10  0 11]]
```

Create a 2-dimensional array of size 4 x 3 (composed of 4-byte integer elements), also print the shape, type and data type of the array.

b. Write a program to compute the eigenvalues and right eigenvectors of a given square array given below: $\begin{bmatrix} 3 & -2 \\ 1 & 0 \end{bmatrix}$

c. Compute the sum of the diagonal element of a given array. $\begin{bmatrix} 0 & 1 & 2 \\ 3 & 4 & 5 \end{bmatrix}$

d. Write a NumPy program to create a new shape to an array without changing its data. Reshape 3x2: $\begin{bmatrix} 1 & 2 \\ 3 & 4 \\ 5 & 6 \end{bmatrix}$ Reshape 2x3: $\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix}$

```
import numpy as np

# create square array
arr = np.array([[3, -2], [1, 0]])

# compute eigenvalues and right
eigenvectors eig_vals, eig_vecs =
np.linalg.eig(arr)

print("Eigenvalues:",
eig_vals) print("Right
eigenvectors:\n",
eig_vecs)
```

Eigen values: [2. 1.]

Right eigenvectors :

$\begin{bmatrix} 0.89442719 & 0.70710678 \end{bmatrix}$

$\begin{bmatrix} 0.4472136 & 0.70710678 \end{bmatrix}$

```
import numpy as np

# create array
import numpy as np

# create original array
arr = np.array([[1, 2], [3, 4], [5, 6]])

# reshape to 3 by 2
arr_3by2 = arr.reshape(3, 2)

# reshape to 2 by 3
arr_2by3 = arr.reshape(2, 3)

print("Original array:\n", arr)
print("Reshaped to 3 by 2:\n", arr_3by2)
print("Reshaped to 2 by 3:\n", arr_2by3)
```

Sum of diagonal elements: 4

Original array:

```
[[1 2]
 [3 4]
 [5 6]]
```

Reshaped to 3 by 2:

```
[[1 2]
 [3 4]
 [5 6]]
```

Reshaped to 2 by 3:

```
[[1 2 3]
```

```
[4 5 6]]
```

```
# Import the matplotlib.pyplot module, which allows us to create plots
import matplotlib.pyplot as plt

# Define the data we want to plot
languages = 'Java', 'Python', 'PHP', 'JavaScript', 'C#', 'C++'
popularity = [22.2, 17.6, 8.8, 8, 7.7, 6.7]
colors = ["#1f77b4", "#ff7f0e", "#2ca02c", "#d62728", "#9467bd", "#8c564b"]

# Define how much we want to "explode" each slice of the pie chart
explode = (0.1, 0, 0, 0, 0, 0)

# Use the pie function to create the pie chart
plt.pie(popularity,      # The data to plot (popularity percentages)
```

```
    explode=explode,      # How much to "explode" each slice
    labels=languages,     # Labels for each slice (the language
names) colors=colors,    # Colors for each slice
    autopct='%1.1f%%',   # Format for the percentage labels
    shadow=True,         # Whether to include a shadow effect
    startangle=140       # The angle at which the chart
starts
    )

# Set the aspect ratio of the chart to be equal, so it appears circular
plt.axis('equal')

# Display the chart
plt.show()
```

```
# Set the aspect ratio of the chart to be equal, so it appears circular
plt.axis('equal')

# Display the chart
plt.show()
```
